
Original gyro acquisitions 2 Hz / sigma 2 deg/s per reading
Same nominal inertia, control and frozen past residual torque at all rates
Mocap reference
Controlled nonlinear Euler
Controlled, no gyroscopic term
Held angular velocity
Roll [deg]
Pitch [deg]
Yaw [deg]
Time from common initialization [s]
Centers and +/-2sigma are Euler moment proxies from the same exact rotation moments; no Gaussian coverage claim.

2 Hz / sigma 2 deg/s: local width and mocap error
Held angular velocity
Controlled, no gyroscopic term
Controlled nonlinear Euler
Roll 2sigma [deg]
Pitch 2sigma [deg]
Yaw 2sigma [deg]
SO(3) error [deg]
Time [s]
