
Why the refined nonlinear prediction drifts: held-out torque/acceleration mismatch
Mocap-SG required torque
Refined model + frozen past residual
x torque [Nm]
y torque [Nm]
z torque [Nm]
Mocap SG alpha
Model alpha at mocap SG omega
x alpha [rad/s2]
y alpha [rad/s2]
z alpha [rad/s2]
Original bag time [s]
Original bag time [s]

Within-acquisition nonlinear error budget / sigma 2.5 deg/s
Rate is reacquired at each boundary; attitude is not reset
