
Raw gyro versus mocap SG body angular velocity / original header clocks
wx [deg/s]
wy [deg/s]
wz [deg/s]
Raw gyro
Mocap SG window 0.08 s
Mocap SG window 0.16 s
Mocap SG window 0.32 s
Time from original 5 s interval start [s]
Positive lag: gyro(t) matches mocap-SG(t-lag). No gain, bias or axis rotation fitted.

Raw gyro versus mocap SG body angular velocity / shift-only alignment
Raw gyro
Mocap SG, no shift
Mocap SG shifted: lag=+4.16 ms
wx [deg/s]
wy [deg/s]
wz [deg/s]
Time from original 5 s interval start [s]
Positive lag: gyro(t) matches mocap-SG(t-lag). No gain, bias or axis rotation fitted.

Fixed-support relative time-shift scan, no amplitude correction
Vector RMSE [deg/s]
Lag [ms]; positive means gyro later
SG 0.08 s, best +14.25 ms
SG 0.16 s, best +4.16 ms
SG 0.32 s, best +17.13 ms
